SITUATION REPORT

600

Number of patients admitted to the cholera treatment centre in Idlib, Syria, in the first two weeks of opening

1. NIGER

Maraliyya Garba brought her two-year-old son Abdourahmane Ibrahim from the village of Totsa to MSF's nutrition centre in Madarounfa for treatment. "I brought my youngest son here because he is severely malnourished," she says. The boy spent two days in the intensive care unit, where he was treated for severe acute malnutrition with medical complications associated with his weakened immune system. Maraliyya Garba and her husband are farmers, but are too scared of the violence sweeping the region to tend their crops and harvest enough to feed their family. One of their daughters was abducted and a ransom was demanded for her return.

2. DEMOCRATIC REPUBLIC OF CONGO

MSF nurse Evariste Bayedi talks to a boy at Simbambéli clinic in Kwamouth. The child's father had planned to sell his plot of land so that he could afford to take his son to the capital, Kinshasa, for medical treatment, but the arrival of MSF's mobile clinic meant that he could be treated free of charge on the spot. In July 2022, intercommunal tensions erupted in Kwamouth, leading to an explosion of violence, with houses set on fire and scores of people attacked, wounded and killed. An MSF team arrived in the area on 24 August to run mobile clinics and provide the displaced people with clean drinking water.

3. MYANMAR

MSF staff disembark from a boat to set up a clinic in Sin Thet Maw village in Paukaw township. Ten years ago, violence erupted in Rakhine state between ethnic Rakhine Buddhist and Rohingya Muslim communities. Hundreds of people were killed, thousands of houses were burned down and some 140,000 people were displaced from their homes, most of them from the Rohingya community. MSF runs clinics within the camps where many people are forced to live, providing mental health counselling and medical referrals.

4. SYRIA

An MSF nurse examines a patient in a cholera treatment centre in Idlib, northwest Syria, where a major cholera outbreak has resulted in at least 15,000 suspected cases and 60 deaths.

5. HAITI

An MSF team member carries a bucket of chlorinated water in a cholera treatment centre in Cité Soleil, Port-au-Prince, after a cholera outbreak was declared on 2 October. MSF has set up cholera treatment centres in four locations across the country. People in Haiti face spiralling violence, a severe fuel shortage and trouble getting hold of clean water and medical care. "Unsafe water is one of the main causes of the spread of cholera," says MSF medical coordinator Auguste Ngantsélé, "Without drinkable water and good waste management, there is a very high risk of a spike in the number of cholera cases, and this needs to be addressed urgently."

JACOB ZOCHERMAN

MAJD ALJUNAID

NUHA HAIDER

“I was coming to the end of my second week in the job and I was looking forward to a day off. In Yemen, Friday is the day off. We’d been working long hours and I’d planned to use the day just to catch up with myself, do some admin and sort things out.

Early on Friday morning, the phone rings. It’s one of my team telling me that they’ve heard the hospital is closing.

‘What do you mean, the hospital is closing?’

‘They’re running out of fuel – there’s no more fuel in the hospital – so they’re shutting everything down.’

‘You’re joking,’ I said. ‘No, no, no, they can’t shut the hospital down.’

MSF runs the maternity unit at the hospital. We have sick patients there, some of them in a critical condition. We have babies in incubators. It will be a disaster. That cannot happen.

What do we do? We need to find fuel, and find it fast...

A CITY SPLIT IN TWO

Taiz is a city in the southwest of Yemen, high up in the mountains. It’s a seven-hour drive from Aden. You drive through the desert and then up a very steep, windy, slightly terrifying road into the mountains, and then you arrive at this beautiful, isolated city.

There have been times during the conflict when the frontlines have split the city in two, and sporadic fighting and injuries from sniper fire and landmines remain a problem. In many ways, it’s still a besieged city. Because of the conflict and blockades, getting anything into or out of Taiz is a big challenge, whether that’s food, equipment or, in this case, fuel.

The medical needs there are huge. When MSF took over the maternity unit in one of Taiz’s hospitals in 2021, the newborn mortality rate was very, very high. The team worked extremely hard to bring it down, and

I was really pleased that, in the time I was there, we had no maternal deaths at all. It's very challenging work.

My job as project coordinator is to support the team. I coordinate all the departments – HR, finance, logistics, supply – and ensure the medical team have everything they need to do their jobs and save lives. In that role, I'm a manager, a fixer, an accountant, a security consultant and a counsellor all rolled into one.

Anyone in the team who has an issue or a problem comes to me and we find a solution. Obviously I can't give technical answers to a surgeon, and I don't know how to fix generators, but what I can do is to find people who can. It's my job to find solutions to problems – such as a hospital running out of fuel...

'WHAT'S OUR PLAN B?'

I got off the phone and immediately jumped on another call on the way to the hospital.

'How much fuel do we have left?'

'Six hours, and then we're out'

'Okay, that's our deadline. What's our Plan B?'

We assess the situation. How many patients do we have? What condition are they in? Can we refer some patients to other hospitals? The medical team get to work on that strategy while I work with the logistics team to find fuel.

Hassan, the logistics manager, and the logistics supervisor, also called Hassan, are both at the hospital already. It's just gone 6 am. I didn't even have to call them, they're here already, working to find solutions. What a team!

That's one of the best things about working here. The staff are so reliable, so hardworking, so welcoming. When I first arrived, all the staff kept giving me presents. It got to the point where I had to say: 'Guys, thank you so much, but you've got to stop with the presents.'

'What about food? Can we keep giving you food?'

'Oh yeah, definitely, you can keep giving me food. It's delicious.'

OLIVIA'S FUEL

We call fuel suppliers. All of them say they can do tomorrow no problem, or the day after, but not today. Part of the trouble is that not only is it Friday, the day off, but it's also Eid. It's the worse possible combination of circumstances.

We make more calls, we talk to more people, we try to beg, we ask to borrow, but everybody says the same thing. Getting a delivery of fuel today is going to be impossible.

“It's my job to find solutions to problems...”

► 17 September 2021. Twelve-month-old Hadeel Ghazi is checked by a doctor in the respiratory unit of MSF's mother and child hospital in Houban.

▼ MSF's surgical team operate on a patient in the general rural hospital in Dhi As Sufal district, Taiz governorate, located near one of the main frontlines in the Yemeni civil war.

Nuha Haider/MSF

Majid Aljunaid/MSF

We talk to the medical team. Some patients can be moved, but for others, such as those being incubated, there is a real risk to life if we move them.

I sit back for a moment. There has to be a solution. I think about a similar situation I was in in Syria. I was with MSF running a COVID hospital and we had run desperately short of oxygen. You can't run a COVID hospital without oxygen. I remember having nightmares about it like I was suffocating and couldn't breathe, I was so desperate to find oxygen. At the last minute we found a solution and got our oxygen.

Don't give up. You can always find the solution if you keep at it.

The team are sitting around the table, following leads, making calls, talking through potential options. Suddenly our Australian midwife, stops and shouts out: 'Olivia's fuel! We should take Olivia's fuel!'

A bit of backstory. Olivia was our watsan (water and sanitation expert) who had spent a lot of time and effort installing an incinerator so we could dispose of waste more effectively and safely. She'd just returned to the UK but had been very particular about ongoing maintenance of the incinerator, and particularly about the incinerator fuel. Just before she left, she made it clear to everyone: 'No one touches the fuel from the incinerator.' Sorry Olivia!

A team goes to check it out. Yes, there's 1,500 litres of fuel in the incinerator storage, enough to tide us over until the delivery comes tomorrow. It looks like we're not going to be burning anything today.

I send a quick text to Olivia. 'Sorry, we're borrowing the fuel from your incinerator. I promise, promise we'll put it back in 24 hours.'

We swing into action, but there's a new problem. We don't have a pump to extract the fuel from the incinerator tank, so we'll have to do it manually. That's fine, but we're already past the four-hour mark, with only a little over an hour left before the lights go out.

Hassan and Hassan start to collect jerrycans from all over the hospital and soon a team is working on filling them. Another team then carries them physically from one side of the hospital, where the incinerator is, to the other side, where the generator sits, now running dangerously low on fuel.

We're running against the clock and it's super-stressful but, in less than an hour, the job is done. The generator is stocked up, the lights stay on and, most importantly, all the patients are safe and nobody dies. It's a good day's work." 🌱

Names have been changed.

Rita Benjelloun is a project coordinator who has worked in Yemen, Syria, Haiti and Democratic Republic of Congo.

Andrii Ovod

23 OCTOBER 2022

“On 10 October I had just left the train station in Dnipro, in eastern Ukraine, when the car I was travelling in suddenly starting shaking. A fraction of a second later, we heard the blast from the first missile. By the time we reached the office a few minutes later, we'd felt four more shockwaves from strikes. Since then, there have been regular waves of drone attacks targeting infrastructure and civilian areas across the country. Yesterday there were more hits close to where we were working.

We're now gearing up for the very real possibility that the electricity will go off across large parts of Ukraine as a result of these ongoing attacks. That will have drastic knock-on effects on hospitals, on healthcare, on people's lives. People are heading into winter with the risk that there will be no electricity, no heating and no water.

We're doing our best to prepare. We're helping a number of hospitals near the frontline get ready for winter. We're running mobile clinics in areas previously under Russian occupation where people have had no access to the medicines they need for months. We're running an ambulance service, as so many have been destroyed. MSF operates a specially designed medical train that evacuates patients from near the frontlines of the fighting to safer areas and we're looking at ways to keep that running, even if the electricity fails. It's been kitted out by MSF and Ukrainian Railways with an intensive care unit and inpatient carriages. To date,

Hussein Amri/MSF

we've evacuated 1,851 patients in 60 trips, most of them suffering from blast injuries and shrapnel wounds. We've also used the train to evacuate children from orphanages and patients from psychiatric hospitals close to the frontlines.

Last weekend we carried one family on the train who needed to be evacuated from the war zone. They were from Nikopol and had returned to their home on 5 October after having fled the war months earlier. On 6 October, just one day after returning, their house was hit by a shell. The father suffered minor injuries, but one of his daughters was badly injured and ultimately had to have both legs amputated. She was only six years old.

Like this family, so many Ukrainians have brought their families back to Ukraine thinking it was getting safer. But the ongoing drone attacks killing civilians and the electricity blackouts are making many rethink that decision.

One of the things that's very powerful about being on MSF's train is the strong bond that develops within the team and with the patients. You're all in this confined space for a number of days, and there is a real sense of shared purpose, for both Ukrainian and international staff.

It's an intense environment. Many people have been trapped in towns and villages that have experienced weeks of heavy shelling. Many people have been living in basements for weeks or months. There was one 81-year-old woman who had been living in her basement and had buried her son before finally saying she'd had enough. She was lightly injured and we were able to evacuate her.

When people come onto the train, they want to talk, to tell their stories, to have human contact. It's often the first time they've been in a reasonably safe environment for weeks or months and it's very emotional, for them and for the staff.

We're providing some mental healthcare for patients and also for our staff. Everybody here knows someone among their family or friends who has died in this war. The people working for us are very committed and want to do as much as they can to help. With that comes the risk of exhaustion, which we have to look out for.

I don't think we've really grasped the scale yet of the psychological impact of this war. It's something that, as MSF, we need to focus more of our attention on.

The Ukrainians are doing the vast bulk of the medical work in this war. Our role is about filling the gaps, whether that's supplying ambulances, running the medical train or providing medicines to people cut off from healthcare. With these latest attacks, people's medical needs in Ukraine are growing, and it's vital that we are here.” 🇺🇦

SOMALIA EYE CAMPS

Since 2018, MSF has been running a series of eye camps in Somalia, providing treatment and surgery for a range of debilitating eye conditions. Ranging from cataract surgery to treatment for eye diseases to glasses prescriptions, the camps provide a one-stop shop for essential eye healthcare.

“Eye problems, like many other health issues in Somalia, often go untreated,” says Dr Fuad, MSF medical coordinator for Somalia. “Common conditions such as cataracts all too often lead to blindness if left untreated. Losing one’s sight – which often leads to losing one’s livelihood – can be devastating, especially in a country affected by conflict and poverty. Which is why this relatively simple surgery can have a huge impact on patients’ lives, improving their chances of living a dignified and healthy life.”

The eye camps are held at local hospitals and clinics and include screening, surgery, treatment, health education and counselling. Since commencing the camps, the teams of eye specialists have reached thousands of people living with eye diseases, in many cases helping them to regain their sight.

2. EYE TESTS

“What’s also important is that, through this work, we’re able to reach a group of people we often struggle to treat: elderly men. And in these areas of Somalia, when you reach that group, it opens doors for your work. It encourages people to accept you and what you’re doing, so that then you can reach other people.”

1. SCREENING CLINIC

“There is a lot of organisation and preparation for each camp,” says Dr Fuad, “especially as we have to manage the camps remotely and work with partners due to security reasons. In the weeks before a camp, we will spread the word that a camp is going to occur and, in the days leading up to it, will hold a range of clinics where people are screened to ascertain if they need surgery, glasses, further examination or medical treatment.”

the eye camps at
msf.org.uk/eyecamp

TREATING CATARACTS

This condition causes cloudy patches to form in the lens of the eye. It impairs vision and, without surgical intervention, causes blindness.

1. Light entering the eye is scattered, causing blurry vision.

2. A simple operation can replace the damaged lens with a new one, allowing light to focus correctly on the retina.

£19.30

Prescription glasses for children

£2.63

Medication drops for eye infections

4. FITTING GLASSES

Many school-age children in Somalia have never had an eye test before. In one eye camp run by MSF in the Hudur region, more than 4,000 schoolchildren had their eyes tested. Every child who needed glasses was provided with prescription lenses and standard plastic frames, all paid for by MSF.

"Many children have been struggling to see at school," says Dr Fuad. "But then they come to the eye camp,

they are provided with a prescription and glasses, and their performance, their ability to learn, their quality of life and their options for the future are all improved.

"The standard plastic frames that we provide are simple and inexpensive but, like so much else about this project, they are completely lifechanging."

3. CATARACT SURGERY

"By the day the surgeons arrive, everything and everybody is ready," says Dr Fuad. "Cataract surgery is done under local anaesthetic and is a relatively short procedure, lasting five to ten minutes." On average, about 4,000 people are treated during each camp.

5. FAST RESULTS

"What we're doing here is not complicated, even the surgery," says Dr Fuad. "But it's completely transformative for the people treated. Overnight, people can have their vision and their independence restored to them. The results are immediate and tangible. One man we operated on had been blind for five years but was suddenly able to see."

STAFF PROFILE

Cooking for colleagues

ARIF SOHAIL IS MSF'S SUPPLY TEAM LEADER IN SIERRA LEONE, WORKING TO ENSURE THAT MEDICAL TEAMS HAVE THE EQUIPMENT AND MATERIALS THEY NEED TO SAVE LIVES. DESPITE THE BUSY WORKLOAD, HE'S FOUND TIME TO LEARN A NEW SKILL...

SIERRA LEONE
WORDS AND PHOTOGRAPHY
ARIF SOHAIL

“When I took my first job abroad with MSF, I knew there would be lots of things to learn. In any new assignment, there are local needs, ways of working, different systems. But there was also something else: I decided to learn how to cook.

I am originally from Khost, in southeastern Afghanistan. I was born in 1988, into a big extended family of 27 people. For almost all of my life, there has been fighting going on in my country.

In my early 20s, I got a job in the supply team at MSF's maternity hospital in Khost, which is one of MSF's busiest worldwide. The needs are huge: in the first six months of this year alone, around 10,000 women gave birth there.

I quickly learned that the supply team plays a key role in a medical humanitarian organisation like MSF. It's about making sure that all the goods – medical equipment, logistics materials, everything – arrive on time. So, if a surgeon needs a scalpel or a premature baby needs oxygen, there's no delay. That's how we support medical activities and save lives.

I'm a father of five daughters; the oldest is nearly 12 and the youngest is nearly two. All of my children were born in MSF's hospital in Khost so, before I even joined the team, MSF was already part of my family.

As a father, it's my responsibility to be an example to my girls and support them have a good life. Like other Afghans, we've endured difficult situations because of

the consecutive wars. Compared to other provinces, life in Khost is better in terms of security and the economy. However, many people have left to work abroad, sending money back to support their families.

I, too, left Afghanistan to support my family. But working with MSF means I also have the opportunity to help others facing difficult circumstances, extend my professional experience and learn more about different cultures and communities.

After working in the maternity hospital, I was promoted to warehouse advisor at MSF's head office in Kabul. A short trip to support the MSF team in Nigeria inspired me to apply to work abroad, and in 2019 I got my first full assignment: as warehouse manager in Sierra Leone.

MSF has worked in Sierra Leone for 35 years. We're currently focusing on getting medical care to mothers and children and treating people with tuberculosis.

Working abroad, I miss my family, my friends and Afghanistan in general. I follow the situation there closely. I also miss the cooking. Most men in Afghanistan don't know how to cook. So, going abroad for the first time, I struggled with food.

Since I'm now away regularly, I've been trying my best to learn to cook, from YouTube videos and from my MSF colleagues. Being away from our beloved families is not easy. We try to support each other, and one way of doing this is to cook something and share it with the team. When I go home on vacation, I occasionally do the cooking as well. My wife is always surprised when she

sees me in the kitchen! I also love getting outside – even a game of badminton helps us come together and manage stress.

I now have almost ten years' experience working in supply chain management in different countries with MSF. One thing I've learned is that there is no 'normal'.

Sometimes a sudden emergency means an influx of people needing care and lots of urgent requests for supplies. Sometimes we have challenges importing potentially lifesaving equipment, or prices fluctuate, or we have to ensure that items purchased from local markets meet MSF standards.

In Sierra Leone this year we have worked on 95 international freight shipments via air, sea and land, all bringing with them the materials that teams need to care for our patients.

It gives me extra energy and motivation to be part of an organisation that stands by people at the time they need it most." 🌱

▼ Arif enjoys a meal with the MSF team in Sierra Leone.

“Being away from our beloved families is not easy...”

A RECIPE FROM ARIF

“Kabuli pulao is an Afghan rice dish that I recently cooked for my colleagues in Sierra Leone. I hope you enjoy it!”

INGREDIENTS

- 4 cups long-grain or basmati rice
- 1 cup sesame oil or other oil
- 2 large onions
- 1 kg goat/beef/lamb meat
- 1 tbsp salt
- 1 tbsp cumin seeds
- 6 cups hot water
- 4 carrots (if available)
- 1 cup of red raisins (if available)

METHOD

1. Wash the rice and soak in cold water for three hours.
2. Slice the onions.
3. Heat the oil in a large deep-sided pan and fry the onions for five minutes.
4. Add the meat to the pan; add salt to taste.
5. Add the cumin seeds.
6. Fry for ten minutes.
7. Add four cups of hot water. Cover with a lid and cook on medium heat for 45 minutes until the meat is tender.
8. Meanwhile finely slice the carrots.
9. Remove the pan from the heat. Keeping the meat in the pan, take half the soaked rice and spread it on top to form a smooth layer, covering the meat completely. On top of this, add the carrots and raisins and spread them out. Finally spread the rest of the rice in a layer over the top.
10. Add enough hot water to ensure that the rice is covered by about half an inch – around two cups' worth.
11. Wrap the lid of the pan in a clean tea towel. Secure carefully and use to cover the pan.
12. Return to a low-to-medium heat for 45 minutes until all the water has been absorbed.

PAKISTAN

AKEELA KUL

PHOTOGRAPHY

ASIM HAFEEZ
ZAHRA SHOUKAT

'THE WATER WAS NINE FEET DEEP...'

AKEELA KUL* IS AN MSF COUNSELLOR AND HEALTH PROMOTOR WHO LIVES IN A SMALL VILLAGE IN BALOCHISTAN, ONE OF THE AREAS HARDEST HIT BY THE EXTREME FLOODING THAT LEFT ONE-THIRD OF PAKISTAN UNDERWATER. AFTER LOSING HER HOME, SHE IS NOW HELPING OTHER PEOPLE LEFT HOMELESS BY THE FLOODING.

▼ Dr Bakhtawar talks to a patient at an MSF mobile clinic in Alladad village, in Dadu district, Sindh.

► Children collect water in a camp for people displaced by the flooding in Dadu district, Sindh.

Asim Hafeez

“In June and July, we received normal rainfall and daily life was going fine. At the weekends, I visited my family in my village, which is about three miles from Dera Murad Jamali, where I work with MSF’s outreach team. In my job, we visit local communities to raise awareness about mother and child health and different diseases.

In early August there was an unusual amount of rain and then, on 17 August, the water started coming towards our village and we were instructed to leave.

In the rush, my parents and younger siblings left the village. Thankfully our uncle’s home in Dera Murad Jamali was in a safer area, so we moved there. My brother and sister were left behind to take care of our cattle, which they took to higher ground. Suddenly, the floodwater started to cover the village and they had to flee. They climbed onto the rooftop of a nearby house and watched as the water washed away our cattle, house and farm. The water was nine feet deep. It was heartbreaking to see our house and village underwater.

I took a week’s leave to support my family, but when I saw that so many people needed help, I decided to join MSF’s emergency response. Within two days, I was with a team helping to reach people in faraway flood-affected villages. We found families living in the open. I saw some people sheltering on the side of the road under two wooden bed frames, pushed together and draped with plastic, because their houses were underwater. They had no clean water. Still the rain continued.

We are running mobile clinics and providing people with clean drinking water from MSF’s water treatment plant, which is one of only a few in the region. We are seeing patients with respiratory infections, diarrhoea, malaria and skin infections. The people here are drinking the floodwater, which is contaminated, and it is spreading disease. Those people who need further treatment are referred to MSF’s district hospital.

We have distributed 236 hygiene kits to people taking shelter near Uch Power plant, we have provided 70,000 litres of clean drinking water to displaced families and we have conducted medical consultations for around 2,575 patients.

We recently set up a mobile clinic in my own village, which made me very proud. The people of my village know my work with MSF well and I was happy to provide support to my own community.

So many people still need help. I met one family with three children, all of whom had high fevers. They had travelled a long distance through the floodwaters to seek help for their children. They had nothing: no food, no water, no shelter. I felt their pain. There are many people like them in remote villages who still need assistance. We will continue travelling with our mobile clinics to reach them.” 🌍
